Computer Science and Engineering

HTML – Hyper Text Markup Language

Hypertext - cross-referencing /linking between related sections of text and associated graphic material

Markup - define elements within a document using tags

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE recipe PUBLIC "-//Happy-Monkey//DTD RecipeBook//EN"
"http://www.happy-monkey.net/recipebook/recipebook.dtd">
```

```
<recipe>
```

```
  <title>Peanut-butter On A Spoon</title>
```

```
  <ingredientlist>
```

```
    <ingredient>Peanut-butter</ingredient>
```

```
  </ingredientlist>
```

```
  <preparation>
```

```
    Stick a spoon in a jar of peanut-butter,
    scoop and pull out a big glob of peanut-butter.
```

```
  </preparation>
```

```
</recipe>
```

- Elements are defined by tags (markers)

- Tag format:

- Opening tag: **<tag_name>**

- Closing tag: **</tag_name>**

Syntax:

<tag_name>

Content...

</tag_name>

- Not all tags have content
 - If a tag has no content, its form is **<tag_name ... />**
- The container and its content together are called an *element*

- An HTML comment begins with `<!--` and the comment closes with `-->`.
- HTML comments are visible to anyone that views the page source code, but are not rendered when the HTML document is rendered by a browser.

```
You will be able to see this text.
```

```
<!-- You will not be able to see this text. -->
```

```
You can even comment out things in <!-- the middle of --> a sentence.
```

```
<!--
```

```
Or you can
```

```
comment out
```

```
a large number of lines.
```

```
-->
```

```
<div class="example-class">
```

```
Another thing you can do is put comments after closing tags, to help you find  
where a particular element ends. <br>
```

```
(This can be helpful if you have a lot of nested elements.)
```

```
</div> <!-- /.example-class -->
```

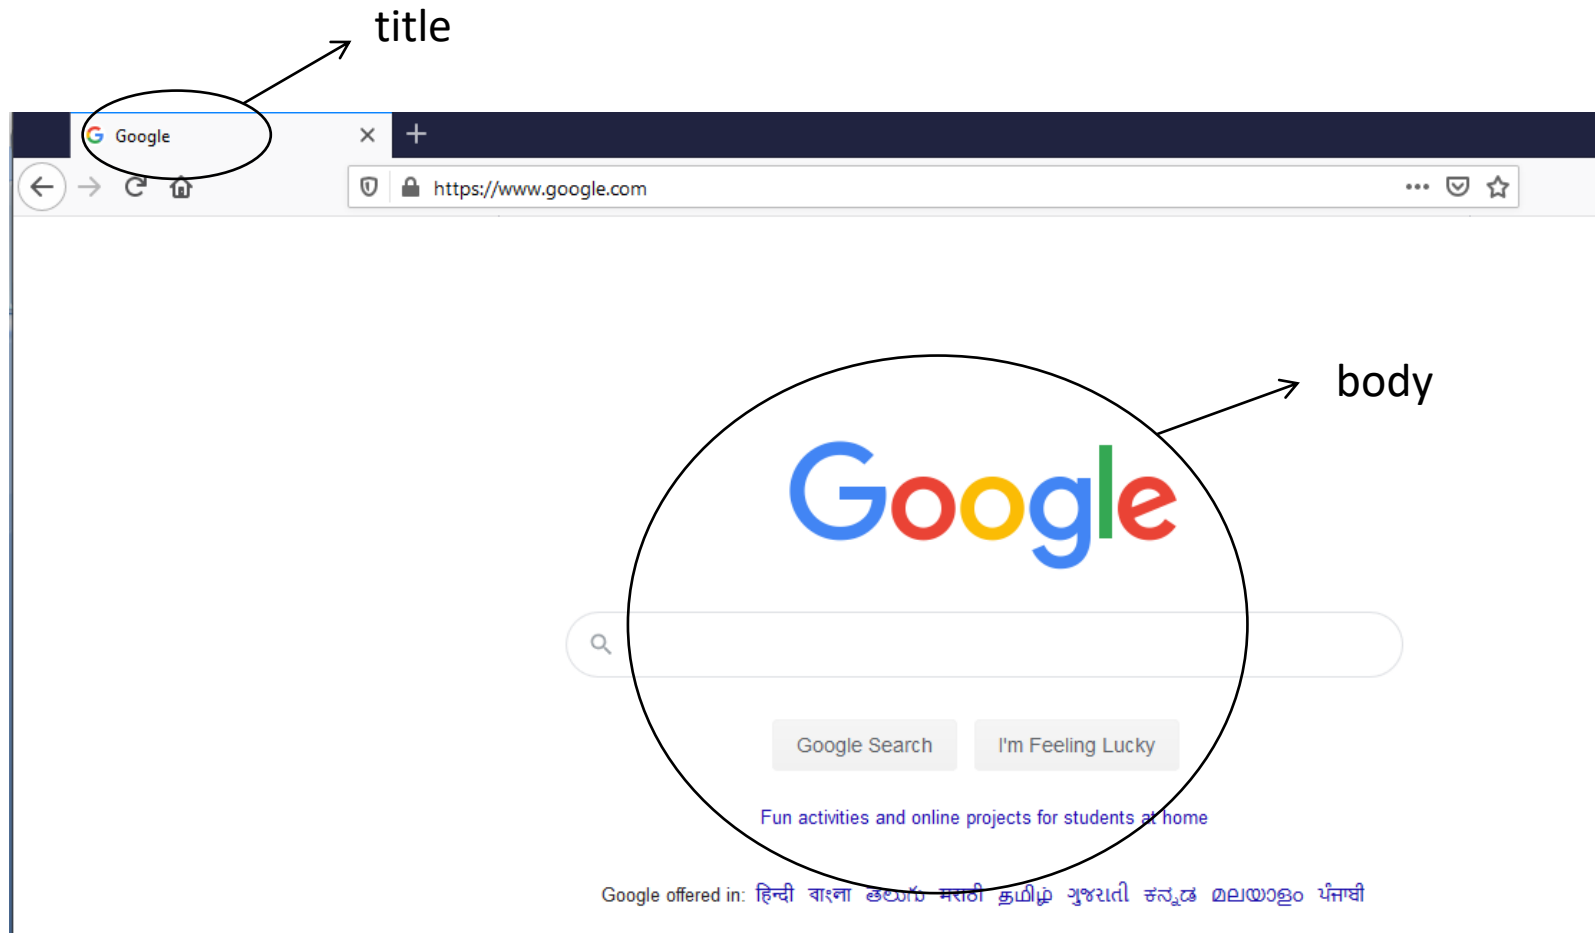

HTML – Basic Markups

Document Structure

```
<html>  
  <head>  
    <title>... </title>  
  </head>  
  <body>  
    ...  
  </body>  
</html>
```

HTML – Basic Markups

Common Tags / Elements

- Text Content
 - Paragraphs
 - Headings
 - Lists
 - Tables
- Images
- Links

- Text is normally placed in paragraph elements
- Paragraph Elements:
 - The <p> tag breaks the current line and inserts a blank line - the new line gets the beginning of the content of the paragraph
 - The browser puts as many words of the paragraph's content as will fit in each line

Example:

<p>

A paragraph always starts on a new line, and browsers automatically add some white space (a margin) before and after a paragraph.

</p>

Example:

<body>

<h1> Aidan's Airplanes </h1>

<h2> The best in used airplanes </h2>

<h3> "We've got them by the hangarful"
</h3>

<h4> We're the guys to see for a good used
airplane /h4> <!-- Regular text size -->

<h5> We offer great prices on great planes
</h5>

<h6> No returns, no guarantees, no
refunds </h6>

</body>

Aidan's Airplanes (h1)

The best in used airplanes (h2)

"We've got them by the hangarful" (h3)

We're the guys to see for a good used airplane (h4)

We offer great prices on great planes (h5)

No returns, no guarantees, no refunds, all sales are final! (h6)

- Superscripts and subscripts
 - Subscripts with `<sub>`
 - Superscripts with `<sup>`

Example: `x₂³`

Display: x_2^3

- Inline versus block elements
- Block elements CANNOT be nested in inline elements

HTML – Basic Markups

Special Characters

- Character Entities:

<i>Char.</i>	<i>Entity</i>	<i>Meaning</i>
&	&	Ampersand
<	<	Less than
>	>	Greater than
”	"	Double quote
'	'	Single quote
(space)	 	Non-breaking space

- Horizontal rules:

`<hr />` draws a line across the display, after a line break

- GIF (Graphic Interchange Format) =8-bit color (256 different colors)
- JPEG (Joint Photographic Experts Group) =24-bit color (16 million different colors)
- Portable Network Graphics (PNG)
- Images are inserted into a document with the tag with the src attribute
 - The alt attribute is required by XHTML

```
<img src = "comets.jpg" alt = "Picture of comets" />
```
- The tag has 30 different attributes, including width and height (in pixels)

HTML – Basic Markups

Images...(cntd.)

```
<html>
  <head> <title> Images </title>
  </head>
  <body>
    <p>
      <img src = "c210new.jpg" alt = "Picture of a Cessna 210"/>
      <br />
      Buy this fine airplane today at a
      remarkably low price <br />
      Call 999-555-1111 today!
    </p>
  </body>
</html>
```

- Hypertext is the essence of the Web!
- A link is specified with the href attribute of <a> (the anchor tag)
 - The content of <a> is the visual link in the document
 - If the target is a whole document (not the one in which the link appears), the target need not be specified in the target document as being the target
- Note: Relative addressing of targets is easier to maintain and more portable than absolute addressing

Example:

```
<html>
```

```
<head> <title> Links </title> </head>
```

```
<body>
```

```
...
```

```
<h2> Special of the month </h2>
```

```
<p> 1960 Cessna 210 <br />
```

```
<a href = "C210data.html"> Information on the Cessna 210  
</a>
```

```
</p>
```

```
</body>
```

```
</html>
```

Aidan's Airplanes

The best in used airplanes

"We've got them by the hangarful"

Special of the month

1960 Cessna 210

[Information on the Cessna 210](#)

1960 Cessna 210 Information

577 hours since major engine overhaul

622 hours since prop overhaul

Buy this fine airplane today at a remarkably low price
Call 999-555-1111 today!

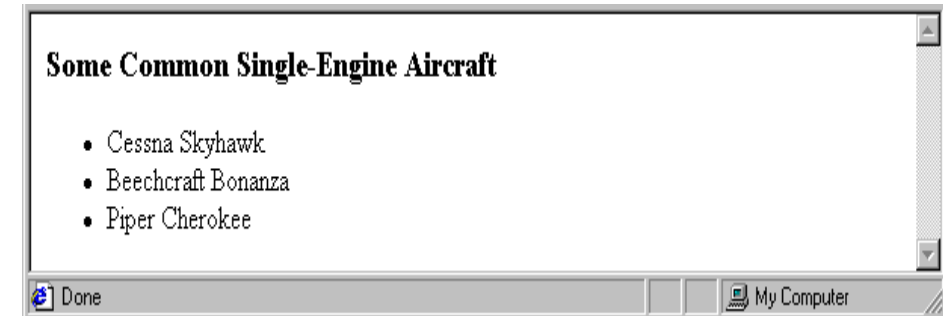

Used to present list of information in well formed and semantic way.

- Three types of Lists:
 - ☐ Unordered list
 - ☐ Ordered list
 - ☐ Definition List

- The list is the content of the `` tag
 - List elements are the content of the `` tag
- ```
<h3> Some Common Single-Engine Aircraft </h3>

 Cessna Skyhawk
 Beechcraft Bonanza
 Piper Cherokee

```

- The list is the content of the <ol> tag
- Each item in the display is preceded by a sequence value

<h3> Cessna 210 Engine Starting Instructions</h3>  
<ol>

<li> Set mixture to rich </li>

<li> Set propeller to high RPM </li>

<li> Set ignition switch to "BOTH" </li>

<li> Set auxiliary fuel pump switch to  
"LOW PRIME" </li>

<li> When fuel pressure reaches 2 to 2.5  
PSI, push starter button </li>

</ol>

- List is the content of the `<dl>` tag
- Terms being defined are the content of the `<dt>` tag
- The definitions themselves are the content of the `<dd>` tag

`<h3> Single-Engine Cessna Airplanes </h3>`

`<dl >`

`<dt> 152 </dt>`

`<dd> Two-place trainer </dd>`

`<dt> 172 </dt>`

`<dd> Smaller four-place airplane </dd>`

`</dl>`

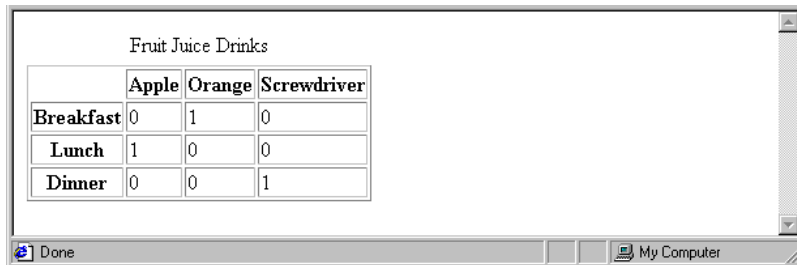

- A matrix of cells, each possibly having content
- The cells can include almost any element
- Some cells have row or column labels and some have data
- A table is specified as the content of a `<table>` tag
- A border attribute in the `<table>` tag specifies a border between the cells
- Tables are given titles with the `<caption>` tag, which can immediately follow `<table>`

# HTML – Basic Markups

## Tables...(cntd.)

- Each row of a table is specified as the content of a `<tr>` tag
- The row headings are specified as the content of a `<th>` tag
- The contents of a data cell is specified as the content of a `<td>` tag.

	Apple	Orange	Screwdriver
Breakfast	0	1	0
Lunch	1	0	0
Dinner	0	0	1

```
<table border = "border">
 <caption> Fruit Juice Drinks </caption>
 <tr>
 <th> </th>
 <th> Apple </th>
 <th> Orange </th>
 <th> Screwdriver </th>
 </tr>
 <tr>
 <th> Breakfast </th>
 <td> 0 </td>
 <td> 1 </td>
 <td> 0 </td>
 </tr>
</table>
```

# HTML – Basic Markups

## Tables : Column Span

<tr>

<th colspan = "3"> Fruit Juice Drinks

</th>

</tr>

<tr>

<th> Orange </th>

<th> Apple </th>

<th> Screwdriver </th>

</tr>

- If the rows have labels and there is a spanning column label, the upper left corner must be made larger, using rowspan

```
<table border = "border">
<tr>
 <td rowspan = "2"> </td>
 <th colspan = "3"> Fruit Juice Drinks
 </th>
</tr>
<tr>
 <th> Apple </th>
 <th> Orange </th>
</tr>
 ...
</table>
```
