

1. Develop an HTML page exactly as shown below.

- When the MAIL button is clicked, the default mail tool opens with the "To" field populated as "lecturer@pes.edu".
- The "Name" field has a width of 20 chars but can only allow 10 chars to be typed.
- The "RESET" button is greyed out.
- Comp Sc Dept is automatically selected.

Name:

Comp Sc: ☒

Electronics: ☐

Electrical: ☐

2. Create a webpage for online registration for an international seminar.

- i. The participants can be students or faculty members or industry professionals
- ii. The participants should give a choice for accommodation from a list of four hotels. A participant may select more than one hotel.
- iii. Participant must be able to enter his age as between "15-25" or "25-35" or "35-45" or "45 and above"
- iv. Additionally the form should accept personal details like Name, gender, contact details etc.

Create the form with suitable input elements and default values.

3. What are the main properties of the form tag and what values can those properties take?

4. List at least five different input elements and give example code for them.

5. What if an input tag is created with a type that is not recognized by the browser? Will the browser ignore the tag?
